

## (New Updated) Keep Up With New Microsoft 70-247 206q Exam Questions For 100 Percent Passing Exam (21-40)

Where To Get The 100 Percent Valid 70-247 Exam Dumps? Nowadays, more and more people are planning to take the hot 70-247 exam, and get many so called 70-247 study materials, but do they valid enough for passing exam? Many comments on the Internet said that they failed the exam with useless 70-247 braindumps, and one premium valid 70-247 PDF or VCE exam dumps are urgently needed. Now, PassLeader -- one famous IT Certification Exam Study Materials Supplier -- is offer the 100 percent valid 70-247 206q exam dumps, which covers all the new 70-247 exam questions with detailed explanation and it has been helped many people passing exam easily! Welcome to choose the best 70-247 206q exam questions from [passleader.com](http://passleader.com), both PDF and VCE format are available now!

Why Not Try PassLeader New Premium 70-247 Exam Dumps?

QUESTION 21 You configure the System Center 2012 Service Manager connector for System Center 2012 Virtual Machine Manager (VMM). You need to ensure that users can access the VMM data from the System Center Service Manager console. Which two tasks should you perform from the System Center Service Manager console? (Each correct answer presents part of the solution. Choose two.) A. Import the VMM management packs. B. Create a catalog group. C. Create a type projection. D. Import the VMM classes by using the CSV connector. E. Create views based on VMM classes. Answer: AE Explanation:

<http://technet.microsoft.com/en-us/library/hh519744.aspx> <http://technet.microsoft.com/en-us/library/hh519785.aspx> QUESTION 22

Your network contains an Active Directory domain. The domain contains two servers named Server1 and Server2. Server1 has System Center 2012 Virtual Machine Manager (VMM) installed. Server2 has System Center 2012 Operations Manager installed. You need to configure Operations Manager to monitor the VMM infrastructure. Which three management packs should you install on Server2? (Each correct answer presents part of the solution. Choose three.) A. the Internet Information Services 7 Monitoring Management Pack B. the Microsoft SQL Server Monitoring Management Pack C. the File Services Management Pack D. the Windows Server Hyper-V Management Pack E. the Monitoring Pack for Active Directory (AD) F. the Windows Server Operating System Management Pack G. Windows Server DNS 2003/2008/2008 R2 Monitoring Management Pack Answer: ABF Explanation:

There are some other dependencies that must be downloaded and installed. These packs contain the required management packs, namely: \* (A) Microsoft.Windows.InternetInformationServices.2003 - Windows Server Internet Information Services 7 Monitoring Management Pack \* Microsoft.Windows.InternetInformationServices.2008 - Windows Server Internet Information Services 7 Monitoring Management Pack \* Microsoft.Windows.InternetInformationServices.CommonLibrary - Windows Server Internet Information Services 7 Monitoring Management Pack (B) Microsoft SQL Server Monitoring Management Pack F: The IIS 2008 management pack actually needs Microsoft.Windows.Server.2008.Discovery (which needs Microsoft.Windows.Server.Library.mp) which is part of Windows Server Operating System Management Pack for Operations Manager 2007. Reference: Installing all the Prerequisite MPs for the Cloud Services Management Pack. QUESTION 23 Your company has a datacenter in Los Angeles. The datacenter contains the following servers: - A server named App1 that has System Center 2012 App Controller installed. - A server named Portal1 that has the Windows Azure Subscription Management Portal installed. - A server named Server1 that has Active Directory Certificate Services (AD CS) installed. You need to configure a connection from App1 to a Windows Azure subscription. The solution must ensure that you can manage the subscription from Portal1. You issue a certificate from Server1 and then export it. What should you do next? (Each correct answer presents part of the solution. Choose two.) A. From App1, import the certificate. B. From Portal1, import the certificate. C. Request a new certificate to be used on App1. D. Request a new certificate to be used on Portal1. Answer: AB Explanation: <http://technet.microsoft.com/en-us/library/hh221344.aspx>

<http://www.thomasmaurer.ch/2012/06/system-center-2012-app-controller-connecting-to-windows-azure/> <http://kevingreeneitblog.blogspot.com/2011/11/cloud-management-with-system-center-3126.html> QUESTION 24 Your company has three data centers located in New York, Los Angeles and Paris. You deploy a System Center 2012 Virtual Machine Manager (VMM) infrastructure. The VMM infrastructure contains 2,000 virtual machines deployed on 200 Hyper-V hosts. The network contains a server named DPM1 that has System Center 2012 Data Protection Manager (DPM) installed. You need to recommend a

solution for the infrastructure to meet the following requirements:- Automatically backup and restore Virtual machines by using workflows.- Automatically backup and restore system states by using workflows.What should you include in the recommendation? (Each correct answer presents part of the solution. Choose two.)

- A. Deploy System Center 2012 Orchestrator.
- B. Install the Integration Pack for System Center Virtual Machine Manager (VMM).
- C. Install the Integration Pack for System Center Data Protection Manager (DPM).
- D. Deploy System Center 2012 Operations Manager.
- E. Deploy System Center 2012 Service Manager.

Answer: ACE  
Explanation:<http://technet.microsoft.com/en-us/library/hh420337>

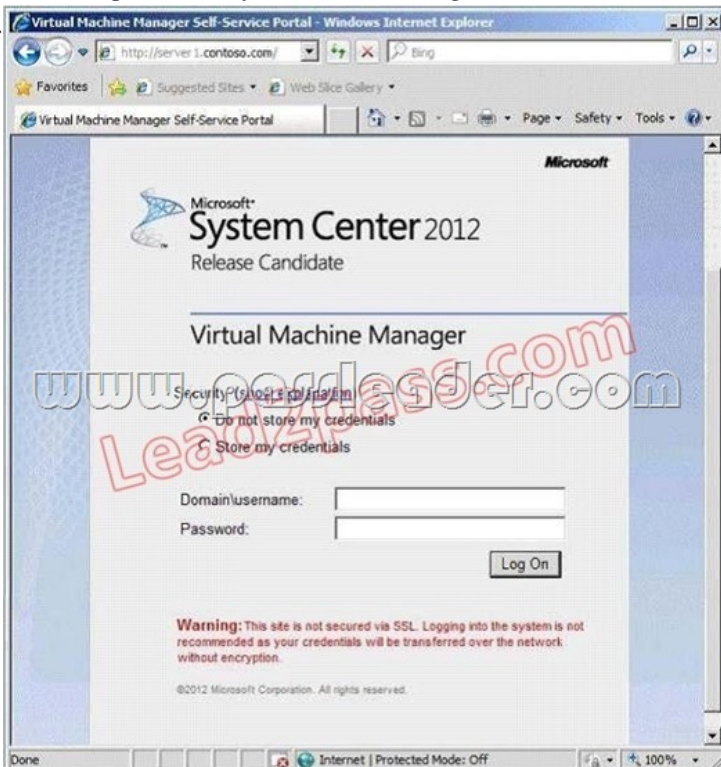

QUESTION 25 You have a System Center 2012 Service Manager infrastructure and a System Center 2012 Operations Manager infrastructure. You enable the Alert Connector in Service Manager. Operations Manager has the Microsoft SQL Server Monitoring Management Pack installed. You plan to configure the Alert Connector to receive SQL Server alerts from Operations Manager. You need to prepare the Service Manager infrastructure for the planned configuration. Which two tasks should you perform? (Each correct answer p resents a complete solution. Choose two.)

- A. Install the SQL Server Notification Services.
- B. Enable the Operations Manager CI connector.
- C. Import the SQL Server Management Pack.
- D. Create a runbook.
- E. Create a notification channel.
- F. Create an incident template.

Answer: BC  
Explanation:

B: In System Center 2012 Service Manager, there are two types of connectors for System Center Operations Manager. You use the first type of connector, the alert connector, to automatically generate incidents that are based on Operations Manager alerts. You use the second type of connector, the configuration item (CI) connector, to import discovered objects from Operations Manager as configuration items into the Service Manager database.  
C: \* You must import some System Center Operations Manager management packs into Service Manager. When you install Service Manager, a set of System Center Operations Manager management packs for common objects and the required Windows PowerShell scripts are copied to your Service Manager installation folder.\* For the Operations Manager CI connector to function correctly, you have to import a set of management packs into Service Manager.  
Reference: Importing Data and Alerts from System Center Operations Manager.  
Reference: How to Create a System Center Operations Manager Connector.

QUESTION 26 Your network contains an Active Directory domain named contoso.com. Certificate autoenrollment is configured for all client computers in the domain. You install System Center 2012 Virtual Machine Manager (VMM) on a server named Server1. You install the Virtual Machine Manager Self-Service Portal (VMMSSP) on Server1. Users report that they receive the message shown in the exhibit when they connect to the VMMSSP. (Click the Exhibit button.

You need to ensure that the users connect to the VMMSSP by using HTTPS. What should you do? A. From the Certificates console, add a Cross-Certificate download URL. B. From Internet Information Services (IIS) Manager, modify the binding settings. C. From the VMM Administrator Console, modify the Network Settings. D. From Internet Information Services (IIS) Manager

6.0, modify the security communication settings. Answer: BExplanation: <http://technet.microsoft.com/en-us/library/dd548288.aspx>  
QUESTION 27 You have a System Center 2012 Service Manager infrastructure that contains two servers named Server1 and Server2. A user named Testuser5 is unable to modify work items and configuration items. You need to ensure that TestUser5 is assigned the necessary permissions to perform the following tasks:- Create and update work items.- Create and update configuration items.To which User Role Profile should you add TestUser5? A. Change InitiatorsB. Problem AnalystC. Incident ResolversD. Advanced Operators Answer: DExplanation: <http://technet.microsoft.com/en-us/library/ff461054>

QUESTION 28 You have a System Center 2012 Service Manager infrastructure that contains a single server named Server1. You plan to use a new account named Service1 as the Operational Database Account. You plan to configure Server1 to use a new account named Service1 as the logon account for the System Center Data Access Service. You need to identify which roles must be assigned to Service1. Which two roles should you identify? (Each correct answer presents part of the solution. Choose two.) A. the Service Manager Administrators User Role ProfileB. the Microsoft SQL Server db\_ddladmin fixed database roleC. the Service Manager Workflows User Role ProfileD. the Service Manager Advanced Operators User Role ProfileE. the Microsoft SQL Server configsvcs\_users database roleF. the Microsoft SQL Server sdk\_users database role Answer: AFExplanation: <http://technet.microsoft.com/en-us/library/hh495527.aspx>

QUESTION 29 You have a System Center 2012 infrastructure that contains the following:- Orchestrator- Service Manager- Virtual Machine Manager(VMM)The corporate compliance policy states that the following tasks must be audited:- When an administrator updates a service.- When a user requests a change to a service.- When an administrator approves a change to a service.You need to recommend a solution that meets the requirements of the compliance policy. Which portal should you include in the recommendation? A. the App Controller portalB. the Service Manager Self-Service PortalC. the Virtual Machine Manager Self-Service Portal (VMMSSP)D. the Virtual Machine Manager Self-Service Portal (VMMSSP) 2.0 Answer: BExplanation: <http://blogs.technet.com/b/servicemanager/archive/2010/02/04/action-log-history-and-auditing-in-service-manager.aspx>

QUESTION 30 Your network contains an Active Directory forest named contoso.com. The forest contains a System Center 2012 Operations Manager infrastructure. Your company, named Contoso Ltd., has a partner company named A.Datum Corporation. The A.Datum network contains an Active Directory forest named adatum.com. Adatum.com does not have any trusts. A firewall exists between the A.Datum network and the Contoso network. You configure conditional forwarding on all of the DNS servers to resolve names across the forests. You plan to configure Operations Manager to monitor client computers in both of the forests. You need to recommend changes to the infrastructure to monitor the client computers in both of the forests. What should you include in the recommendation? (Each correct answer presents part of the solution. Choose two.) A. Allow TCP port 5723 on the firewall.B. Deploy a gateway server to adatum.com.C. Create a DNS zone replica of adatum.com.D. Allow TCP port 5986 on the firewall. E. Create a DNS zone replica of contoso.com.F. Deploy a gateway server to contoso.com. Answer: ABExplanation: A: Gateway, System Center Management service, 5723/TCP.B: if there is a firewall between the agents and management servers, multiple authorized endpoints must be defined and maintained in the firewall rules to allow communication between them. To reduce this administrative overhead, Operations Manager has a server role called the gateway server. Gateway servers are located within the trust boundary of the agents and can participate in the mandatory mutual authentication. Because they lie within the same trust boundary as the agents, the Kerberos V5 protocol for Active Directory is used between the agents and the gateway server. Each agent then communicates only with the gateway servers that it is aware of. The gateway servers communicate with the management servers.Reference: Operations Manager 2012 Firewall Scenarios.Reference: Distributed Deployment of Operations Manager.

QUESTION 31 Your company has a private cloud that is managed by a System Center Service Manager 2010 Service Pack 1 (SP1) infrastructure. The infrastructure contains four servers as shown in the following table

<http://www.passleader.com/70-247.html> QUESTION 31 Your company has a private cloud that is managed by a System Center Service Manager 2010 Service Pack 1 (SP1) infrastructure. The infrastructure contains four servers as shown in the following table

Server name
MGT1
DATA1
SSRS1
SQL1

You upgrade MGT1 and DATA1 to Service Manager 2012. You need to ensure that DATA1 can continue to Server name Server role deploy reports to SSRS1. Which two tasks should you perform? (Each correct answer presents part of the solution. Choose two.) A. Modify the RSReportServer.config file on SSRS1.Server4 VMware ESX Server 2.5.B. Modify the RSSrvPolicy.config file on SQL 1.Server5 VMware ESX Server 3.5.C. Copy the Microsoft.EnterpriseManagement.Reporting.Code.dll file to SSRS1. Server name Server role.D. Modify the RSReportServer.config file on MGT1.Server1 Management server.E. Copy the Microsoft.EnterpriseManagement.Reporting.Code.dll file to SQL 1. Server2 Data warehouse management server.Server3 Microsoft SQL Server Reporting Services.F. Modify the RSSrvPolicy.config file on DATA1.Server4 Microsoft SQL Server.Host11 Windows Server 2008 Service Pack 2 (SP2). Answer: ACEExplanation:<http://technet.microsoft.com/en-us/library/hh519664>

QUESTION 32Your network contains an Active Directory domain named contoso.com. You plan to install System Center 2012 Virtual Machine Manager (VMM) on server named Server1. During the installation, you receive the error message shown in the exhibit. You need to install VMM 2012 on Server1. What should you instruct a domain administrator to do first?

A. Create a service location (SRV) record named \_tcp.server1.dkm.contoso.com and a host (A) record named DKM.B. Create a service connection point (SCP) object named DKM.TCP.contoso.com, and then modify the permissions of the SCP object.C. Create a container named DKM, and then modify the permissions of the container.D. Create a security group named DKM, and then modify the permissions of the group. Answer: CEExplanation:

<http://blogs.technet.com/b/scvmm/archive/2012/06/18/kb-system-center-2012-virtual-machine-manager-setup-fails-to-create-child-objects-for-dkm.aspx><http://www.aidanfinn.com/?p=11446>

QUESTION 33You deploy a System Center 2012 Service Manager infrastructure. You plan to update the scheduled backups to include Service Manager information. You need identify which databases must be added to the scheduled backups. Which two databases should you identify? (Each correct answer presents part of the solution. Choose two.) A. DWDDataMartB. DWStagingAndConfigC. DWRepositoryD. ServiceManagerE. OMDWDataMartF. DWASDataBase Answer: BDEExplanation:The ServiceManager database is sometimes referred to as the CMDB. It is the central store of all configuration items and work items managed by Service Manager. It also stores all the customizations and configuration for the Service Manager product itself. DWStagingAndConfig stores the configuration for the data warehouse and is used as a temporary place to stage the data as it moves from the ServiceManager database into the other parts of the data warehouse (DWRepository and DWDDataMart).

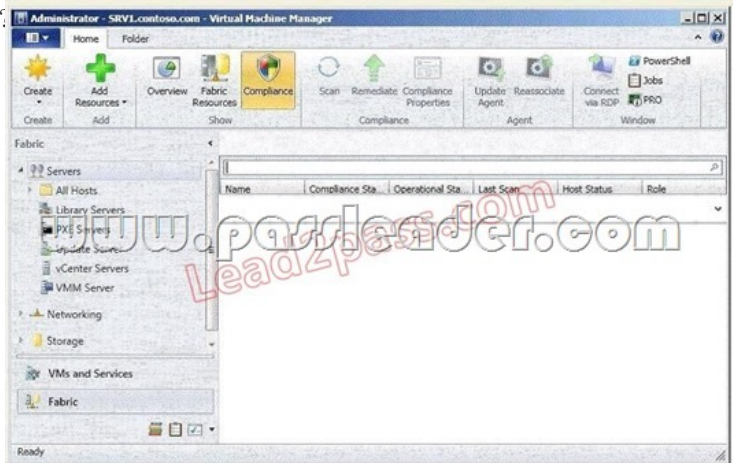

<http://technet.microsoft.com/en-us/library/hh519598.aspx>

QUESTION 34You plan to deploy System Center 2012 Virtual Machine Manager. The planned deployment must support the bare-metal deployment method. You need to identify the roles required for the planned deployment. What roles should you identify? (Each correct answer presents part of the solution. Choose two.) A. Windows Deployment Services and DHCP ServerB. Windows Deployment Services and Network Policy and Access ServicesC. Active Directory Domain Services and Active Directory Lightweight Directory ServicesD. Active Directory Certificate Services and Active Directory Rights Management ServicesE. Active Directory Domain Services and Domain Name Services (DNS) Answer: AEExplanation:

<http://technet.microsoft.com/library/gg610634.aspx>  
<http://blogs.technet.com/b/cloudytom/archive/2012/01/02/scvmm-2012-bare-metal-deployment-checklist.aspx>

QUESTION 35Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that runs Windows

Server 2008 Service Pack 2 (SP 2). Server1 has System Center Virtual Machine Manager (VMM) 2008 R2 Service Pack 2 (SP2) installed. The VMM database is stored locally by using Microsoft SQL Server 2005 Express Edition. You need to upgrade Server1 to VMM 2012. The solution must minimize costs. What should you do before you upgrade Server1? (Each correct answer presents part of the solution. Choose two.) A. From Server1, run the uninstall program for VMM 2008 R2 and specify the remove data option.B. Upgrade Server1 to Windows Server 2008 R2 Service Pack 1 (SP1).C. Remove the computer account of Server1 from the domain.D. On Server1, install SQL Server 2008 Express.E. Move the VMM database to a server that has SQL Server 2008 R2 Enterprise Edition installed. Answer: AEExplanation:E: SQL Server minimum requirement: SQL Server 2008 R2 or SQL Server 2008.Not D: Windows server minimum requirement: Windows Server 2008 R2.Reference: Prerequisites for Upgrading to VMM. QUESTION 36You have a System Center 2012 Virtual Machine Manager (VMM) infrastructure that contains 20 Hyper-V hosts. You configure VMM to use a Window Server Update Services (WSUS) server named WSUS1 as an update server. You open the VMM Administrator Console as shown in the exhibit. (Click the Exhibit button.) You need to identify which hosts comply with the Sample Baseline for Security Updates. What should you do?

A. Modify the properties of the baseline.B. Modify the properties of the All hosts group.C. Select the All hosts group from the fabric navigation pane.D. Modify the properties of WSUS1. Answer: A QUESTION 37Your company has a private cloud managed by a System Center 2012 Virtual Machine Manager (VMM) infrastructure. The server fabric contains three servers named Host1, Host2, and Host3. The servers are configured as shown on the following table

Server name	Server role	Host group	Con
Host1	Hyper-V host	HG1	Fibre Ch
Host2	VMM library	HG2	iSCSI
Host3	Hyper-V host	HG3	Fibre Ch

The networking fabric contains a SAN named STORAGE1. STORAGE1 supports cloning. You create a SAN copy-capable template named Template1 for a new virtual machine. Template1 uses a VHD stored on Host2. You need to ensure that Template1 can be used to provision virtual machines on Host1 and Host3. The solution must use the minimum amount of administrative effort and must use SAN cloning. What should you do? (Each correct answer presents part of the solution. Choose two.) A. Move Template1 to Host1.B. Move Template1 to Host3.C. Add Host1 to HG2.D. Configure Host2 to use Fibre Channel connection. E. Configure Host3 to use an iSCSI connection.F. Add Host3 to HG1. Answer: AFExplanation:Put the template on the Library server (host 1). Add the second host (host3) to the Host group on the library server (host1). Reference: Rapid Provisioning of Virtual Machines Using SAN Copy Overview.<http://technet.microsoft.com/en-us/library/gg610594.aspx> QUESTION 38Your network contains a domain named contoso.com. The domain contains five virtualization servers. The servers are configured as shown in the following table

Server name	Server role
Host1	Windows Server 2008 Service Pack 2 (SP2)
Host2	Hyper-V Server role
Host3	Microsoft Hyper-V Server 2008 R2
Host4	VMware ESX Server 2.5
Host5	VMware ESX Server 3.5

The network also contains a server named Server6 that runs VMware vCenter Server. In the domain, you install System Center 2012 Virtual Machine Manager (VMM) on a server named Server7. You configure Server7 to manage Server6. You need to ensure that you can add all of the servers to the VMM fabric. Which two actions should you perform? (Each correct answer presents part of the solution. Choose two.) A. Upgrade Server1 to Hyper-V Server 2008 R2 Service Pack 1 (SP1). B. Upgrade Server2 to Hyper-V Server 2008 R2 Service Pack 1 (SP1). C. Install Hyper-V Server 2008 R2 Service Pack 1 (SP1) on Server3. D. Install Hyper-V Server 2008 R2 Service Pack 1 (SP1) on Server4. E. Install Hyper-V Server 2008 R2 Service Pack 1 (SP1) on Server5. Answer: CD Explanation: D (not E): VMM 2012 SP1 can manage Hyper-V hosts and clusters, as well as VMware ESX/ESXi 3.5 and 4.1, vCenter Server 4.1 (support for vSphere 5 is coming) and now also Citrix XenServer 6.0.

<http://technet.microsoft.com/en-us/library/gg610649><http://technet.microsoft.com/en-us/library/hh430991> QUESTION 39 Your network contains an Active Directory forest named bluyonderairlines.com. The forest contains a System Center 2012 Operations Manager infrastructure. Your company, named Blue Yonder Airlines, has a partner company named Alpine Ski House. The Alpine Ski House network contains an Active Directory forest named alpineskihouse.com. Alpineskihouse.com does not have any trusts. A firewall exists between the Alpine Ski House network and the Blue Yonder Airlines network. You configure conditional forwarding on all of the DNS servers to resolve names across the forests. You plan to configure Operations Manager to monitor client computers in both of the forests. You need to recommend changes to the infrastructure to monitor the client computers in both of the forests. What should you include in the recommendation? (Each correct answer presents part of the solution. Choose two.) A.

Allow TCP port 5986 on the firewall. B. Create a DNS zone replica of blueyonderairlines.com. C. Create a DNS zone replica of alpineskihouse.com. D. Deploy a gateway server to alpineskihouse.com. E. Allow TCP port 5723 on the firewall. F. Deploy a gateway server to blueyonderairlines.com. Answer: DE Explanation: E: Gateway, System Center Management service, 5723/TCP. D:

if there is a firewall between the agents and management servers, multiple authorized endpoints must be defined and maintained in the firewall rules to allow communication between them. To reduce this administrative overhead, Operations Manager has a server role called the gateway server. Gateway servers are located within the trust boundary of the agents and can participate in the mandatory mutual authentication. Because they lie within the same trust boundary as the agents, the Kerberos V5 protocol for Active Directory is used between the agents and the gateway server. Each agent then communicates only with the gateway servers that it is aware of. The gateway servers communicate with the management servers. Reference: Operations Manager 2012 Firewall Scenarios. Reference: Distributed Deployment of Operations Manager. QUESTION 40 You have a System Center Service Manager 2010 Service Pack 1 (SP1) infrastructure that contains multiple servers. The infrastructure contains the following: - Multiple class workflows - Custom Microsoft SQL Server Reporting Services reports - Custom views of the System Center Service Manager Console - Custom webpages on the Service Manager IT Analyst Self-Service Portal You plan to upgrade to Service Manager 2012.

You need to identify which task must be performed after the planned upgrade. What should you identify? A. Recreate the custom workflows. B. Recreate the custom webpages. C. Recreate the custom reports. D. Recreate the custom views. Answer: B Explanation: <http://technet.microsoft.com/en-us/library/hh524327>
